G.N YESHWANT

AI/ML Engineer × VLSI Design | Edge AI · CNN · YOLOv8 · Data
analysts | Triple-Degree: IIT Madras · IIT Guwahati · JNNIE
Chennai, Tamil Nadu, India

Summary

Most engineers pick a lane. I decided to build the whole road. I'm simultaneously pursuing a B.E. in Electrical Engineering (VLSI Design) at JNNIE, a B.Sc. in Data Science at IIT Madras, and an AI/ML Certification at IIT Guwahati — not because I had to, but because I genuinely couldn't stop at just one. What that means in practice: I can sit in a conversation with a hardware engineer and a data scientist, understand both sides, and connect the dots between them. That systems-level thinking — from silicon to software — is what I bring to every problem. On the ML side, I've built a CNN-based chip defect detection system that hits 94% classification accuracy, and deployed a YOLOv8 model running at 28 FPS on a Raspberry Pi — real edge inference, not just a notebook experiment. On the data side, I work with Python, SQL, and Power BI to build pipelines and analytics that actually help people make decisions. Right now I'm also leading front-end development at Dark Dragons Caelestis, building production web platforms with React and JavaScript — so I know what it means to ship something that has to work, not just look good in a demo. The problems that excite me most sit at the boundary of hardware and intelligence: semiconductor inspection, edge AI systems, and data pipelines that feed real decisions. I'm actively looking for internship opportunities in VLSI Design & Testing, ML Engineering, or Data Analytics where I can contribute from day one. If that sounds like a fit, I'd love to connect. Reach me at gnyeshwant7576@gmail.com — I respond fast.

Experience

Dark Dragons Caelestis Pvt Ltd
Front-End Development Team Lead
September 2025 - Present (10 months)
Tamil Nadu, India

started as a Research student and worked as a python developer and lead a team for one semester and change path to Developed responsive website for

describing my company what is sell, were we are, what tech do we use, How efficient are we etc.

Built dynamic front-end interfaces using HTML, CSS, and JavaScript

A little vibe coding of react

Worked with team members to convert requirements into functional features

National Service Scheme

Talent Scout

November 2022 - May 2024 (1 year 7 months)

Chennai, Tamil Nadu, India

Education

J.N.N Institute of Engineering

Bachelor of Engineering - BE, EE(VLSI) · (January 2024 - June 2028)

IIT Madras Foundation

Bachelor of Science, Data Science

Indian Institute of Technology, Guwahati

CREDIT LINKED COURSE, Artificial Intelligence and Machine Learning · (June 2025 - July 2026)
